ABSTRACT:

The present invention relates to methods and systems for routing mobile vehicles under maintenance and operational constraints. In the case of <u>aircraft</u>, the methods and systems may generate an <u>aircraft routing proposal based on information</u> describing a possible flight of an aircraft, determine a proposed flight assignment for the <u>aircraft</u> based on the generated <u>aircraft routing proposal and complying</u> with the information describing the possible flight of the aircraft, and determine whether the proposed flight assignment meets a decision criterion describing requirements for <u>aircraft routing</u>. If the decision criterion is unmet, the methods and systems may optimize the <u>proposed flight assignment such that the proposed flight</u> assignment meets the decision criterion. The methods and systems may also generate a <u>flight assignment plan using the proposed flight</u> assignment that meets the decision criterion.

ABSTRACTED-PUB-NO: US20030167110A

BASIC-ABSTRACT:

NOVELTY - The method involves determining a <u>proposed flight</u> and maintenance schedule assignment based on a generated <u>aircraft routing</u> and scheduling proposal. The proposed assignments are checked to determine if they meet a decision criterion describing requirements for routing and scheduling. If the decision criterion is not met the assignments are optimized and corresponding plans are generated so that the criterion is met.

Record Display Form

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (a) an apparatus for route and schedule maintenance of aircraft
- (b) a computer readable medium for performing <u>routing</u> and schedule maintenance of <u>aircraft</u>.

USE - Used for routing and scheduling maintenance for vehicles.

ADVANTAGE - The optimized <u>routing</u> and scheduling <u>maintenance model</u> maximizes <u>aircraft</u> utilization, minimizes the amount of wasted remaining flying time and cycles between maintenance events.

DESCRIPTION OF DRAWING(S) - The drawing shows a network environment subjected to aircraft route and schedule maintenance method.

ABSTRACT:

A system and method directed to providing a communication system for receiving data from sources outside the <u>aircraft</u>, storing the received information and then presenting the received information on a portable display device having a screen that may be read with the necessary information. The portable display device may interface with a docking station for receiving the data from a communication

management unit and then removed and passed freely among <u>flight</u> attendants or other personnel on the <u>aircraft</u>. Further, the portable display device may be interfaced with other docking stations in other parts of the <u>aircraft</u> to communicate with the communication management unit.

CROSS REFERENCE TO RELATED APPLICATION

[0001] This application claims priority from U.S. Provisional Application 60/642,190 titled, "SYSTEM AND METHOD FOR PORTABLE COMMUNICATION DEVICE IN AN AIRCRAFT," which was filed on Jan. 5, 2005, and which is incorporated by reference.
